

HOST COMPUTER, MOBILE COMMUNICATION DEVICE, PROGRAM, AND RECORDING MEDIUM

ABSTRACT

The object of the present invention is to provide an authentication system capable of achieving suitable authentication processing while guaranteeing the maximum convenience for the customer.

A first communication terminal PD1 is built into a television TV that can be connected to the Internet, and communications with an authentication control company BS are possible via the first communication terminal PD1. The authentication control company BS is, for example, a telecommunications company, and performs authentication control for a plurality of product supplier companies SP1 to SP3 according to the product purchase status on the television TV.

Furthermore, the present invention simplifies the appropriate procedures by setting authentication levels for authentication control.
